

Cellwood – Anaerobic pre-Treatment System

Highest quality Digester feed

The Cellwood Pulping pre-treatment system provides the highest quality digester feed from low quality dirty feedstocks.

Cellwood supplies a complete system for dissolving and separating organic materials, for digestion processes.

The system is automatically controlled from feed conveyer to digester feeding by a fully integrated control system.

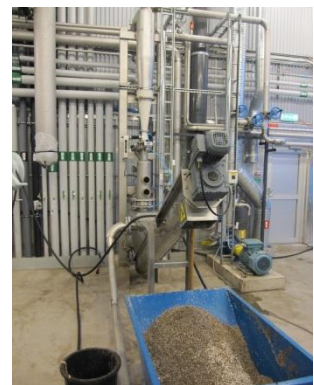

System benefits

- Compact and robust system,
- Low energy consumption
- Optimized for each customer
- Clean feed with high yield
- Low maintenance requirements
- Handles poor quality feeds without disturbing the process
- Effective dissolving of 99% of the particles in the substrate < 4mm

Full scale pilot plant

Cellwood operates a full scale pilot plant in Sweden. Any type of feedstock can be tested during customer trials including household waste.

Salvtech is the sole UK agent for Cellwood Machinery
